Pengujian Perangkat Lunak Report_Fault_Based_Mutation

Ferdianty Mariany Panjaitan	• •	11423008
Ruth Heppi Evelin Sinambela	• •	11423011
Andika Parlinggoman Tampubolon		11423021
Rino Jeremia Christopher Gultom	••	11423033
Abet Bertand M.P Manurung	:	11423038
Natan Obet Nego Hutahaen	:	11423054

Code Original:

```
. .
       "github.com/gin-gonic/gin"
"cbt-api/config"
   func Login(c *gin.Context) {
       var userInput struct {
           Email string json:"email"

Password string json:"password"
       if err := c.ShouldBindJSON(&userInput); err != nil {
          c.JSON(http.StatusBadRequest, gin.H{"error": "Invalid input"})
        if err := config.DB.Where("email = ?", userInput.Email).First(&user).Error; err != nil {
   if err == gorm.ErrRecordNotFound {
                c.JSON(http.StatusUnauthorized, gin.H{"error": "User not found"})
            c.JSON(http.StatusInternalServerError, gin.H{"error": "Internal server error"})
        // Membandingkan password yang dimasukkan dengan password yang disimpan
        if err := bcrypt.CompareHashAndPassword([]byte(user.Password), []byte(userInput.Password)); err != nil {
            c.JSON(http.StatusUnauthorized, gin.H{"error": "Incorrect password"})
        token, err := auth.GenerateJWT(user.Id, user.Email)
            c.JSON(http.StatusInternalServerError, gin.H{"error": "Could not generate token"})
        c.JSON(http.StatusOK, gin.H{"message": "Login successful", "token": token})
```

Mutant Versi 1: Mengganti pengecekan error pada Password (Ferdianty)

```
package controller
import (
    "github.com/gin-gonic/gin"
"cbt-api/config"
    "cbt-api/entity"
    "cbt-api/auth"
    "golang.org/x/crypto/bcrypt"
    "gorm.io/gorm"
func Login(c *gin.Context) {
    var userInput struct {
       Email string `json:"email"`
Password string `json:"password"
    if err := c.ShouldBindJSON(&userInput); err != nil {
       c.JSON(http.StatusBadRequest, gin.H{"error": "Invalid input"})
    var user entity.Users
    if err := config.D8.Where("email = ?", userInput.Email).First(&user).Error; err != nil {
   if err := gorm.ErrRecordNotFound {
        c.JSON(http.StatusUnauthorized, gin.H{"error": "User not found"})
        c.JSON(http.StatusInternalServerError, gin.H{"error": "Internal server error"})
    return
    token, err := auth.GenerateJWT(user.Id, user.Email)
       c.JSON(http.StatusInternalServerError, gin.H{"error": "Could not generate token"})
    c.JSON(http.StatusOK, gin.H{"message": "Login successful", "token": token})
```

Mengganti pengecekan error pada password (bcrypt.CompareHashAndPassword)

- Mutant: Jika pengecekan err == nil digunakan pada bcrypt.CompareHashAndPassword, maka fungsi akan gagal mendeteksi password yang salah.
- **Test Case yang relevan**: Test case yang memverifikasi login dengan password yang salah **dapat** membunuh mutant ini karena mutant ini mengubah cara pengecekan password.

Mutant Versi 2: Mengubah status HTTP pada kesalahan "Invalid Input" (Ruth)

```
package controller
    "github.com/gin-gonic/gin"
"cbt-api/config"
     "cbt-api/entity"
     "golang.org/x/crypto/bcrypt"
      'net/http'
     "gorm.io/gorm"
func Login(c *gin.Context) {
    var userInput struct {
        Email string 'json:"email"

Password string 'json:"password"
    if err := c.ShouldBindJSON(&userInput); err != nil {
    c.JSON(http.StatusBadRequest, gin.H{"error": "Invalid input"})
     if err := config.DB.Where("email = ?", userInput.Email).First(&user).Error; err != nil {
   if err == gorm.ErrRecordNotFound {
      c.JSON(http.StatusUnauthorized, gin.H{"error": "User not found"})
        c.JSON(http.StatusInternalServerError, gin.H{"error": "Internal server error"})
    return
    token, err := auth.GenerateJWT(user.Id, user.Email)
if err != nil {
        c.JSON(http.StatusInternalServerError, gin.H{"error": "Could not generate token"})
     c.JSON(http.StatusOK, gin.H{"message": "Login successful", "token": token})
```

Mengubah status HTTP pada kesalahan "Invalid input"

- Mutant: Mengubah status HTTP dari http.StatusBadRequest menjadi http.StatusInternalServerError saat terjadi input yang tidak valid.
- Test Case yang relevan: Test case yang mengirimkan input JSON yang tidak valid akan mendeteksi perubahan ini karena status HTTP yang salah akan tercatat.

Mutant Versi 3 : Mengganti pengecekan error pada pencarian user di database (Andika)

```
.
      package controller
            "github.com/gin-gonic/gin"
"cbt-api/config"
            "cbt-api/entity"
"cbt-api/auth"
            "golang.org/x/crypto/bcrypt"
"net/http"
             "gorm.io/gorm"
     func Login(c *gin.Context) {
             var userInput struct {
   Email string 'json:"email"
   Password string 'json:"password"
            if err := c.ShouldBindJSON(&userInput); err != nil {
   c.JSON(http.StatusBadRequest, gin.H{"error": "Invalid input"})
            var user entity.Users
if err := config.DB.where("email = ?", userInput.Email).First(&user).Error; err != nil {
   if err == gorm.ErrRecordNotFound {
        c.JSON(http.StatusUnauthorized, gin.H{"error": "User not found"})
                   c.JSON(http.StatusInternalServerError, gin.H{"error": "Internal server error"})
            // Membandingkan password yang dimasukkan dengan password yang disimpan
if err := bcrypt.CompareHashAndPassword([]byte(user.Password), []byte(userInput.Password)); err == nil { // Salah: harusnya err != nil
c.JSON(http.StatusUnauthorized, gin.H{"error": "Incorrect password"})
            // Menghasilkan JWT token jika password benar
token, err := auth.GenerateJWT(user.Id, user.Email)
if err != nil {
                  c.JSON(http.StatusInternalServerError, gin.H{"error": "Could not generate token"})
             // Mengembalikan token JWT ke client
             c.JSON(http.StatusOK, gin.H{"message": "Login successful", "token": token})
```

Mengganti pengecekan error pada pencarian user di database

- Mutant: Jika pengecekan kesalahan saat mencari user di database diubah dari err == gorm.ErrRecordNotFound menjadi err == nil, maka program akan menganggap user ditemukan meskipun tidak ada dalam database.
- **Test Case yang relevan**: Test case yang mengirimkan email yang tidak terdaftar akan mendeteksi perubahan ini karena status HTTP akan salah jika user tidak ditemukan.

Mutant Versi 4 : Salah menangani kesalahan jika token tidak dapat dihasilkan (Natan)

```
package controller
     "github.com/gin-gonic/gin"
"cbt-api/config"
     "cbt-api/entity"
     "cbt-api/auth"
     "golang.org/x/crypto/bcrypt"
"net/http"
      "gorm.io/gorm"
func Login(c *gin.Context) {
     var userInput struct {
          Email string 'json:"email"
Password string 'json:"password"
     if err := c.ShouldBindJSON(&userInput); err != nil {
   c.JSON(http.StatusBadRequest, gin.H{"error": "Invalid input"})
      var user entity.Users
     if err := config.DB.Where("email = ?", userInput.Email).First(&user).Error; err != nil {
   if err == gorm.ErrRecordNotFound {
        c.JSON(http.StatusUnauthorized, gin.H{"error": "User not found"})
           c.JSON(http.StatusInternalServerError, gin.H{"error": "Internal server error"})
      // Membandingkan password yang dimasukkan dengan password yang disimpan
     if err := bcrypt.CompareHashAndPassword([]byte(user.Password), []byte(userInput.Password)); err == nil ( // Salah: harusnya err != nil c.]SON(http.StatusUnauthorized, gin.H{"error": "Incorrect password"})
     token, err := auth.GenerateJWT(user.Id, user.Email)
if err != nil {
          c.JSON(http.StatusInternalServerError, gin.H{"error": "Could not generate token"})
      c.JSON(http.StatusOK, gin.H{"message": "Login successful", "token": token})
```

Salah menangani kesalahan jika token tidak dapat dihasilkan

- Mutant: Mutant ini membalikkan pengecekan error saat token tidak bisa dihasilkan.
- Test Case yang relevan: Test case yang menguji pembuatan token dan memverifikasi response code dapat mendeteksi perubahan ini karena akan mengembalikan response error meskipun token tidak berhasil dibuat.

Mutant Versi 5 : Salah memberikan status HTTP pada kesalahan use (Abet)

```
import (
    "github.com/gin-gonic/gin"
    "cot-api/comfig"
    "cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api/cot-api
```

Salah memberikan status HTTP pada kesalahan pencarian user

- Mutant: Jika status HTTP yang dikembalikan pada pencarian user yang tidak ditemukan diubah dari http.StatusUnauthorized menjadi http.StatusOK, maka akan ada masalah dalam status code yang diharapkan.
- Test Case yang relevan: Test case yang mengirimkan email yang tidak terdaftar harus mendeteksi status code yang salah ini.

Mutant Versi 6 : Salah penanganan kesalahan pada ShouldBindJSON (mengubah pesan kesalahan) (Rino)

```
package controller
import {
    port {
        pethub.com/sin.gonic/gin*
        *cht-abi/config*
        *cht-abi/config*
        *cht-abi/config*
        *cht-abi/config*
        *cht-abi/config*
        *cht-abi/config*
        *goning.cogh/crypts/b/crypt*
        *goning.cogh/crypts/b/crypts/cogh/cogh/crypts/cogh/crypts/b/crypts/cogh/crypts/crypts/b/crypts/crypts/b/crypts/crypts/b/crypts/crypts/b/crypts/crypts/b/crypts/crypts/b/crypts/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/crypts/b/cr
```

Salah penanganan kesalahan pada ShouldBindJSON (mengubah pesan kesalahan)

- Mutant: Mengubah pesan kesalahan pada saat parsing JSON.
- Test Case yang relevan: Test case yang mengirimkan JSON yang tidak valid harus mendeteksi perubahan pesan kesalahan.
